

**NAME**

`mda-dump` – dumps entire contents of MDA files to standard output

**SYNOPSIS**

**`mda-dump`** [**`-hv`**] *file*

**DESCRIPTION**

**`mda-dump`** is a utility for dumping the entire contents of binary MDA data files, which are created by **`saveData`** in **EPICS**. The output format is odd, but it follows exactly the format of the file itself. Unless one of the options is used, **`mda-dump`** needs only *file*, the name of the MDA file.

This program is useful for debugging other programs that interact with MDA files.

**OPTIONS**

- `-h`**      Show the help screen.
- `-v`**      Show the version information.

**AUTHOR**

Dohn A. Arms
